UNIVERSAL NATIONS

Executive Board of the United Nations Development Programme and of the United Nations Population Fund

Second regular session 1996
Item 3 of the provisional agenda
UNFPA

UNIVERSAL NATIONS POPULATION FUND
PROPOSED PROJECTS AND PROGRAMMES

Recommendation by the Executive Director
Assistance to the Government of Chad
Support for a comprehensive population programme

Proposed UNFPA assistance:

$9.0 million, of which $8.0 million would be programmed from UNFPA regular resources. UNFPA would seek to provide the balance of $1.0 million from a combination of UNFPA regular resources and other resources, including multi-bilateral resources, when and to the extent such additional resources become available.

Estimated value of the Government contribution:

To be determined

Duration:

Five years

Estimated starting date:

January 1996

Executing agencies:

Government of Chad
United Nations and United Nations agencies and organizations
National and international non-governmental organizations (NGOs)

Government coordinating agency:

Ministry of Planning and Cooperation
Demographic facts

Population (000)

- Total: 6,361
- Males: 3,141
- Females: 3,220
- Sex ratio (/100 females): 97.6
- Urban: 1,362
- Rural: 4,998
- Per cent urban: 21.4
- Population in year 2000 (000): 7,307

Functional age groups (%)

- Young child: 0-4: 17.4
- Child: 5-14: 26.0
- Youth: 15-24: 18.8
- Elderly: 60+: 5.7
- 65+: 3.6
- Percentage of women aged 15-49: 45.2
- Median age (years): 18.3
- Dependency ratios: total: 88.7
  - (*/100) Aged 0-14: 81.9
  - Aged 65+: 6.8

Agricultural population density

- (/hectare of arable land): 1.3
- Population density (/sq. km.): 5.0

Average annual change (000)

- Population increase: 189
- Births: 285
- Deaths: 111
- Net migration: 0
- Annual population total (% growth): 2.8
  - Urban: 4.1
  - Rural: 2.4
- Crude birth rate (/1000): 41.6
- Crude death rate (/1000): 16.3
- Net migration rate (/1000): 0
- Total fertility rate (/woman): 5.5
- Contraceptive prevalence rate (% 15-44): --
- Gross reproduction rate (/woman): 2.7
- Net reproduction rate (/woman): 2.0
- Infant mortality rate (/1000): 112.0
- Maternal mortality rate (/100,000): 960
- Life expectancy at birth (years)
  - Males: 47.9
  - Females: 51.1
  - Both sexes: 49.5
- GNP per capita (U.S. dollars, 1993): 210

Sources: Population density on arable land is derived from The State of Food and Agriculture 1991 issued by the Food and Agriculture Organization of the United Nations. Figures for gross national product per capita: World Bank, World Tables 1995. Figures for population, total population by sex, population by age group, age indicators, urban-rural population, and population density (/sq. km.) refer to the year 1995; figures for average annual change, rate of annual change, and fertility and mortality are the five-year averages for 1995-2000. These data are from the Population Division, Department of Economic and Social Information and Policy Analysis of the United Nations, World Population Prospects: The 1994 Revision. Figures for urban-rural average annual change are from World Urbanization Prospects: The 1994 Revision and are five-year averages for 1995-2000. The maternal mortality rate is from the The State of World’s Children 1995. Figures for contraceptive prevalence rates are for currently married women aged 15-44 and are from United Nations Population Division, World Contraceptive Use 1994. Two dots (..) indicate that data are not available.
I. SUMMARY

1. The United Nations Population Fund (UNFPA) proposes to support a comprehensive population programme in the amount of $9 million, of which $8 million would be programmed from UNFPA's regular resources, over a five-year period, starting in January 1996, in order to assist the Government of Chad to achieve its population and development objectives. UNFPA would seek to provide the balance of $1 million from a combination of UNFPA regular resources and other resources, including multi-bilateral resources, when and to the extent such additional resources become available.

2. This would be the third UNFPA country programme in Chad. The first one, which covered the period 1989-1993, was followed by a 1994-1995 bridging programme. The proposed programme is based on: (a) the Government's objectives and strategies elaborated in its population policy declaration, its New Policy for Health Development, and the Policy Declaration on the Integration of Women in Development; (b) the recommendations formulated in the June 1993 programme review and strategy development (PRSD) mission report that was updated in June 1995; (c) the aide-memoire prepared by senior officials of concerned ministries in Chad during a programming workshop in August 1995; (d) the experience gained from UNFPA's two preceding programmes; and (e) consultations with other United Nations agencies and international financial institutions, notably UNDP and the World Bank, as well as with some non-governmental organizations (NGOs) operating in the field of population.

3. The long-term objective of the proposed programme is to contribute to the achievement of the Government's goal of reducing population growth to a level that the economy can sustain and to improve the quality of life of the population. The two main immediate objectives would be to contribute to: (a) the reduction of the very high levels of maternal mortality and infant and child mortality; and (b) the creation of support for population activities among the country's opinion leaders and the creation of national awareness of the linkages between population, women's health and socio-economic status, the environment and the development process.

4. All activities under the proposed programme, as in all UNFPA-assisted activities, would be carried out in accordance with the principles and objectives of the Programme of Action of the International Conference on Population and Development (ICPD), which was endorsed by the General Assembly through its resolution 49/128.

II. BACKGROUND

5. Demographic situation. The total population is approximately 6.4 million inhabitants, including about 360,000 nomads (5.7 per cent of the total population). About 80 per cent of the population lives in the arable areas of the southern and southeastern regions which represent only 6 per cent of the national territory. The northern Saharan region (50 per cent of the total land area) is almost
empty, with an estimated population density of 0.2 inhabitants per square kilometre as compared to 42 persons per square kilometre in the south. The urban population is estimated at 21 per cent, one of the highest rates in the Sahel region. This pattern of population distribution, which is an outcome of rural to urban flows intensified by drought, civil wars and other political conflicts coupled with deteriorating economic conditions, has resulted in pressures on natural resources and the social infrastructure, environmental degradation and such social problems as unemployment.

6. Population dynamics. With a natural growth rate of 2.8 per cent a year, Chad's population is expected to reach 7.3 million by the year 2000. The crude birth rate is estimated at 41 per 1,000. Although very high by world standards, the average total fertility rate (TFR) of about 5.5 children per woman is among the lowest in the central African subregion, which has an average TFR of 6.6. The seemingly high prevalence of sexually transmitted diseases (STDs) and infertility in Chad may explain the country's lower fertility status. The proportion of young people under age 20 is 58 per cent.

7. Health status. The health situation in Chad is poor. The crude death rate is estimated at 16.3 per 1,000, and life expectancy at birth is 49.5 years (51.1 years for women and 47.9 years for men). According to the Government, the infant mortality rate and the child mortality rate are as high as 180 and 230 per 1,000, respectively. The average maternal mortality rate is estimated at 800 per 100,000 live births. This high rate is the result of: (a) pregnancies that are too early, too close, too many and too late; (b) the large and increasing number of clandestine abortions, particularly among young people aged 15 to 20 years; and (c) the very low percentage of assisted deliveries, which was estimated at 16.3 per cent in 1991. The prevalence of HIV infection in the overall population is not known, but it is estimated that 6.5 per cent of pregnant women are infected with HIV.

8. Health policies and programmes. The country's health services were completely disrupted during the 1979-1982 civil war. In order to improve the country's health situation, the Government elaborated its New Policy for Health Development (NPDS) in 1988. The main objectives of the NPDS for reproductive health (based on government estimates) for the year 2000 are: (a) to reduce the infant mortality rate from 180 to 120 per 1,000 and the maternal mortality rate from 800 to 400 per 100,000 live births; and (b) to increase the contraceptive prevalence rate, estimated at less than 5 per cent in 1990, to 10 per cent.

9. The NPDS established a health system based on a total of 46 health districts. Each health district comprises a number of social and health centres and a referral centre, which is a clinic equipped to deal with cases transferred from the social and health centres. The social and health centres, which are the first contact point between the population and the health system are mandated to have a minimum package of 11 activities, including pre- and post-natal consultations, health education and reproductive health services. The referral centre has a complementary package of activities, including management of high-risk pregnancies and child-birth.
10. **Family planning services.** Although the modern contraceptive prevalence rate is still very low, there is a potentially high demand for family planning services in the country. This was evidenced by a survey that was conducted at the end of the 1980s in which 58 per cent of the women interviewed cited abortion as a family planning method while 54 per cent expressed their desire to use modern family planning methods for child-spacing. Only about 20 per cent of the social and health centres currently offer family planning services. There are only a few NGOs that deal with family planning, and the Association Tchadienne pour le Bien-Etre Familial (ASTBEF), the national IPPF affiliate, was created only recently.

11. **Availability of population data.** All socio-demographic surveys carried out in Chad since 1964 are of limited scope and/or obsolete. Moreover, the civil registration system is not functioning, and the demographic and social statistics produced by the sectoral departments are of poor quality. The evaluation and analysis of the first census conducted in April 1993 have helped to improve the knowledge of the size and distribution of Chad's population and have provided estimates on the levels of mortality and fertility. However, there is still a lack of reliable data on population trends and the factors affecting mortality, migration and fertility.

12. **Women's socio-economic status.** Chadian women have relatively little formal education, marry at a very early age, and are under-represented in the formal sector of the economy. It is estimated that: (a) about 90 per cent of Chadian women are illiterate as compared to 47 per cent of the men; (b) the proportion of girls decreases from 35 per cent of total enrolment in grade 1 to 17 per cent in grade 6, 16 per cent in secondary schools and 2 per cent at the university level; (c) women represent only 11.6 per cent of the nation's civil service staff and only 1.6 per cent of the decision makers. Nevertheless, the establishment in 1991 of a National Committee for the Integration of Women in Development, the creation of the Division of Law, Legal Affairs and Women's Rights in the Directorate of Women's Promotion and the adoption in September 1995 of the Policy Declaration on the Integration of Women in Development, indicate that there is political will to improve women's socio-economic status and their living conditions. Recently, two women's NGOs were created to defend women's rights and to promote their participation in the development process.

13. **Socio-economic development.** Chad is one of the poorest countries in the world, with a per capita gross national product that has decreased from $190 in 1990 to $136 in 1995. Chad's most intractable development constraints include recurring political instability and domestic strife. In 1987, the Government put in place an economic reform programme that was expanded into a comprehensive structural adjustment effort supported by international financial institutions. However, the economy remains depressed, and public finances are extremely precarious with the Government paying its employees irregularly. However, there have been some recent improvements, with the economy growing 7 per cent in 1994 and an estimated 4.3 per cent in 1995.
14. **Awareness of population issues.** The Government is aware of the interactions between population, women's socio-economic status, environmental issues and the development process. But such awareness has yet to be promoted among the general public. Population awareness activities are recent, limited and not yet coordinated owing to the lack of trained personnel. A special training session for eight IEC personnel was organized in Abidjan, Côte d'Ivoire, last October by the UNFPA-supported information, education and communication (IEC) Training Centre, and a global population IEC strategy has just been approved. One of the main channels for population IEC activities is the radio since national television and newspaper have had very limited coverage.

15. **Population policy.** The Government is of the opinion that the following population problems are having a negative impact on its development efforts: (a) the very high levels of maternal, infant and child mortality; (b) the high urban population growth rate (7 per cent a year); (c) the rapid decline of the rural population and the resulting shortages of agricultural workers; (d) the youthful structure of the population, with rapidly increasing needs for education, training and employment; (e) increasing adolescent fertility; (f) the degradation of the environment caused by population pressures in the southern parts of the country; and (g) women's low socio-economic status. In order to address these specific population problems within a global framework, the Government adopted a population policy declaration in July 1994 that calls for reducing the fertility rate and ensuring a better balance between human resources and the country's development possibilities through a progressive reduction in the population growth rate from 2.5 per cent in 1993 to 2.0 per cent by the year 2005.

III. LESSONS LEARNED

16. UNFPA’s 1994-1995 bridging programme notably contributed to: (a) the adoption of the population policy declaration in July 1994 and the Policy Declaration on the Integration of Women in Development in September 1995; (b) an increase in awareness of the benefits of family planning for family well-being; (c) the processing, evaluation and analysis of the 1993 population census data; and (d) the strengthening of national capabilities in the population field through in-country and overseas training of nationals as well as with the technical support of the country support team (CST).

17. The main constraints to the implementation of the programme included: (a) the complicated procedures of some executing agencies; (b) difficulties in obtaining needed technical backstopping from the CST; (c) lack of awareness of the relationship between population and development processes among certain decision makers; (d) frequent political turmoil and unrest; and (e) the shortage of trained nationals in the population field and the high turnover of those trained under the UNFPA-assisted programme. National execution encountered some difficulties in the beginning because of the lack of knowledge concerning UNFPA financial procedures. The implementation of the programme has also suffered from a delay in the provision of equipment.
18. UNFPA's commitment to the programme amounted to $3.5 million for 1994-1995, out of which $2.3 million were to come from its regular resources. The balance of $1.2 million that was sought from multi-bilateral sources was provided by UNFPA. It is estimated that a total of more than $3.0 million will be spent by the end of December 1995, representing an implementation rate of more than 85 per cent.

Maternal and child health and family planning

19. UNFPA contributed to an intensification of integrated maternal and child health and family planning (MCH/FP) services in the 10 cities that it was serving in 1993 as well as to the extension of such services to six other cities. This was achieved by providing administrative and technical assistance, training health staff in family planning (31 medical doctors and 148 personnel in charge of MCH/FP programmes), continuing to supply contraceptives, rehabilitating some health centres and by conducting operational research. UNFPA's commitment to the MCH/FP sector amounted to $1.7 million for 1994-1995. It is estimated that about $1.63 million will be spent by the end of December 1995, an implementation rate of 96 per cent for the MCH/FP sector.

Information, education and communication

20. The objectives of the bridging programme in the area of IEC were to introduce basic concepts of family life education into the curricula of primary and secondary schools and to increase awareness of gender issues. UNFPA provided assistance for both in- and out-of-school programmes. In the out-of-school component, the main achievement has been the elaboration and adoption of a national IEC strategy, IEC in support of reproductive health services and advocating the population policy declaration among influential groups. In addition, family life education modules were developed and integrated into the curricula of the 29 rural women's agricultural training centres. The main constraints to the implementation of the in-school component were the insufficient technical support from the CST system and the too-frequent turnover of technical directors. UNFPA's commitment to the IEC sector amounted to $700,000 for 1994-1995. It is estimated that more than $350,000 will be spent by the end of December 1995, representing an implementation rate of 50 per cent.

Data collection and analysis

21. The main objective in the area of data collection and analysis was to process, evaluate and analyse the data from the first population census in 1993. UNFPA also assisted in the training of 15 nationals in population census data processing, evaluation and analysis. These achievements were facilitated by the technical support provided by the Dakar-based CST and the local UNFPA office to the Census Bureau as well as by technical contributions from IFORD in Yaoundé, and UNFPA-initiated cooperation between Chad and two neighbouring countries, Cameroon and the Central
African Republic. UNFPA’s commitment to this sector amounted to $500,000 for 1994-1995, and all of this amount was spent by the end of 1995.

Population policy formulation

22. The main achievements in the area of population policy formulation were the establishment of a Population Unit (which has just been upgraded to Population Division) in the Ministry of Planning and the adoption of the population policy declaration in July 1994. UNFPA had committed $150,000 from its regular resources for 1994-1995 for this sector, and it is estimated that $126,000 was spent by the end of December 1995, representing an implementation rate of 85 per cent.

Gender, population and development

23. The objectives in the area of gender, population and development were to provide institutional support to the Directorate of Women’s Promotion (DWP) and to contribute to the elaboration of a new strategy for the improvement of women’s social and economic status. These goals were carried out by providing technical and administrative support and equipment to the DWP, training its staff in management, funding of study tours and contributing to the elaboration of the Policy Declaration on the Integration of Women in Development (PDIWD) adopted in September 1995. The main constraints included the lack of trained and motivated nationals and insufficient support from the CST system. UNFPA’s commitment to this sector amounted to $400,000 for 1994-1995. It is estimated that about $357,000 had been spent by the end of December 1995, representing an implementation rate of 89 per cent.

Other external assistance

24. Apart from co-funding the population census, UNDP has been providing support for the promotion of appropriate technologies and craft industries for women and for activities such as immunization, HIV/AIDS education and prevention, primary health care and training. UNICEF’s 1990-1994 programme of assistance ($25.0 million) provided support for activities in the areas of primary health care, immunization, nutrition, water and sanitation. WHO has been providing general assistance to the Government’s health programme, with special emphasis on MCH/FP, primary health care, HIV/AIDS, water and sanitation, and immunization. The 1992-1996 programme of UNDP’s Office to Combat Desertification and Drought (UNSO) for $2.0 million has been designed to reduce population pressure in certain regions through a relocation programme.

25. The World Bank co-funded the population census, contributed to the development and adoption of the population policy declaration and supported the construction and/or rehabilitation of health units. Its social development action programme includes a household survey in N’djamena, and its newly approved population and health project of $20.0 million for the period 1994-1998 includes,
among other things, support for the elaboration and implementation of the population policy declaration.

26. The 6th European Development Fund (EDF) programme for 1988-1992 in the amount of $14.0 million has contributed to the rehabilitation of health facilities in nine divisions. Its 7th Programme (1993-1997), also for $14.0 million, will contribute to the development of health districts in the same divisions. The EDF is also supporting a sensitization campaign for the protection of the country's flora and fauna as well as a component of a Sahel Regional Programme aimed at introducing environmental education into the school system.

27. The United States Agency for International Development (USAID) has provided the Population Unit with equipment and has assisted in the training of its staff. Up to 1994 USAID supported a MCH/FP programme in the Moyen-Chari Division through the provision of contraceptives and contributed to the processing of census data. Switzerland contributed $3 million to the population census, is contributing to the development of health services, and is supporting a sensitization campaign about desertification in the primary schools. French cooperation in the population field has consisted mainly in providing medical doctors and equipment to hospitals.

28. International NGOs are also active in the population and health field. Doctors Without Frontiers has been contributing to the development of health districts through training and the provision of materials and drugs. Care International has been providing MCH services, supporting environmental education, community development and the promotion of girls' attendance in school.

IV. PROPOSED PROGRAMME 1996-2000

29. The proposed programme has been designed at a time when it is necessary to take into account not only the recommendations of the ICPD but also of the national population policy declaration adopted in July 1994 and the PDIWD adopted in September 1995. The main constraints to the implementation of the previous programmes, which include the long and complicated procedures of executing agencies, previous insufficient support from the CST system, as well as the harmonization of programming cycles of the member organizations of the Joint Consultative Group on Policy (JCGP) starting in January 1996, have also been taken into account. Indeed, the ongoing training programme of nationals in the population field as well as in UNFPA financial procedures and regulations will continue, with a view to intensifying national execution. Moreover, UNFPA will develop strategies for providing Chad with more effective assistance from the CST system.

30. Following the ICPD, the new concept of reproductive health was welcomed in Chad as it addresses many issues of critical importance in the country. These include: (a) infertility, a matter of deep concern in a society that traditionally places a great value on motherhood; (b) increasing adolescent fertility; and (c) induced abortion, which is a consequence of unwanted pregnancies,
especially among teenagers. With respect to the new UNFPA core areas, the updated PRSD mission in July 1995 recorded that the Government of Chad considers the improvement of the socio-economic status of women as essential for an integrated development programme as well as for the control of population dynamics. The mission also noted that the Government is of the opinion that, while keeping in mind gender consideration when elaborating new programmes, it is essential to adopt and implement a specific policy such as the PDIWD aimed at improving women's social and economic status. In this regard, the PRSD mission recommended that UNFPA support for the promotion of the status of women be incorporated in its population and development strategies sector.

Reproductive health

31. In the area of reproductive health, the PRSD mission particularly noted the weakness of the IEC component and misuse of the chief technical adviser as two of the major constraints. With respect to the old MCH/FP concept, the PRSD mission recommended that within the framework of the implementation of this programme, UNFPA support the progressive change to the concept of reproductive health. This would comprise family planning services, including Safe Motherhood; the prevention, detection and treatment of STDs; and follow-up treatment of abortions and sterility. In view of the above, the main objectives in this sector will be to contribute to the intensification and extension of reproductive health services.

32. Under the proposed programme, UNFPA would co-finance with the World Bank a demographic and health survey that would include a knowledge, attitudes and practice component in order to produce basic health indicators, including an estimate of the country's contraceptive prevalence rate. UNFPA would also assist the Government in consolidating and intensifying reproductive health services in the urban health units of the 10 divisions where it is carrying out programme activities and where it intends to extend these services to smaller centres and rural areas of the same divisions. In so doing, by the end of the programme UNFPA assistance would benefit about 90 per cent of the population of Chad as opposed to 53 per cent in 1995. Reproductive health services would then be available in 329 health units out of a total of 349, compared to 71 in 1995. UNFPA would then organize a second demographic and health survey to evaluate the impact of the reproductive health programme.

33. UNFPA would continue to provide technical assistance and administrative support to these health units for a limited period as well as supplying contraceptives, including condoms for the prevention of STDs and AIDS, and other essential reproductive health drugs. The Fund would also supply a minimum package of reproductive health equipment for each of the 329 social and health centres of the 10 targeted divisions and vehicles and motorbikes to equip 8 of the 10 targeted divisions. UNFPA would provide prenatal examination, delivery and IEC kits to equip each of the 39 health district hospitals and a gynaecological/infertility kit for each of the 5 targeted regional hospitals.
34. UNFPA would support: (a) the training of a total of 75 trainers in reproductive health and population IEC in UNFPA-supported specialized centres located in the Africa region; (b) the in-service training of 1,250 reproductive health providers in the five regional training centres located in Chad; and (c) the training in reproductive health and family planning of certain health-care providers, including midwives in the central health districts, nurses in the peripheral health districts and traditional birth attendants, as well as social and community health agents.

35. Other programme activities would include: (a) educational and counseling programmes for adolescents based on interpersonal communication in the youth houses located in the capital city of each division; (b) assistance in rehabilitating some of these youth houses and providing them with adequate equipment and materials; and (c) providing involved NGOs with adequate means and documentation for sensitization activities relating to adolescent sexuality and assisting some of these NGOs in creating and managing youth centres.

36. UNFPA would continue to assist in promoting family life education in the programme of the training centres for agricultural professionals. The women so trained will continue to be an invaluable source for disseminating information on family planning, responsible parenthood and gender issues.

37. UNFPA would support the programme activities of national NGOs that work in the area of reproductive health through capacity building, including training; the supply of equipment; and the creation of regional family planning clinics in addition to the one maintained by ASTBEF in N'djamena. The Fund would also provide support to programmes focusing on adolescent reproductive and sexual health and would support counselling and service provision for these programmes as well as other programmes at the community level. UNFPA would assist these NGOs in carrying out research focused on adolescent fertility and reproductive health.

38. UNFPA would continue to collaborate closely with UNDP in promoting the improvement of women's socio-economic status and in advocacy/IEC activities, with the World Bank as it constructs health facilities, with UNICEF in the expanded programme of immunization and with the European Development Fund in the rehabilitation of health facilities in five divisions.

39. The MCH/FP Division of the Ministry of Public Health would be the implementing body for the reproductive health component of the proposed programme. To avoid unauthorized use of the CTA, the technical assistance would be integrated into the UNFPA-executed sub-component.

Advocacy

40. The PRSD mission noted that the Government's awareness of the necessity for better health and education for Chadian women and of the positive impact of women's empowerment on the development process is yet to be extended to traditional, religious and political leaders. Moreover,
the mission underscored the scarcity of national advocacy/IEC expertise and the insufficient support from the CST, coupled with the extreme difficulty in finding experienced French-speaking external experts. However, the mission noted with appreciation that half a dozen nationals were being trained in the UNFPA-supported IEC training centre in Abidjan.

41. Taking into account the important IEC component of the World Bank's population and health project, UNFPA's two main objectives in the area of advocacy will be to promote the population policy declaration and awareness of the importance of women's empowerment, health and education for the development process. Working towards these objectives would include establishing the High Committee of Population and Human Resources and by organizing special briefing meetings for its members on their role in advocating the population policy declaration. Advocacy activities would also include seeking the support of influential groups such as parliamentarians, political parties and trade-union leaders; religious authorities, through their central structures such as the High Islamic Council, the Catholic Diocesan Council and the Protestant Inter-Church Organization; and sultans and other traditional leaders.

42. Other programme activities would include special radio programmes, using particularly the five regional radio stations and broadcasting in the appropriate national languages spoken in the 10 targeted divisions to promote, inter alia, awareness of the importance of family well-being, women's empowerment, and gender equity and equality for the development process.

Population and development strategies

43. The main objective of the Government in its population and development strategy is to achieve an harmonious and integrated socio-economic development, notably through the implementation of the population policy declaration. The PRSD mission notably pointed out the continuing technical and professional weaknesses of the Population Division and of the Directorate of Women's Promotion which should, respectively, coordinate the implementation of the population policy declaration and the Policy Declaration on the Integration of Women in Development, and recommended their reinforcement.

44. In view of the support being provided by the World Bank for the implementation of the population policy declaration, UNFPA's main objectives will be to contribute to monitoring the sectoral objectives and strategies of the national population programme and the promotion of national awareness of population issues and the necessity of improving women's socio-economic status.

45. These activities would include strengthening the Population Division so that it can use appropriate software and statistical tools to monitor the sectoral objectives of the National Population Programme and making the National Commission of Population and Human Resources operational. UNFPA's efforts in strengthening the Population Division would include strengthening its advocacy
section, which coordinates all advocacy and IEC activities. UNFPA would also contribute to the strengthening of the Population Division by providing two experienced national experts and by continuing support to the training of nationals through workshops and short-term training courses at UNFPA-supported specialized training institutions. The Directorate of Planning where the Population Division is located would be the implementing body of this sub-programme.

46. UNFPA's contribution to the promotion of women's socio-economic status would consist of providing continued institutional support to the Directorate of Women's Promotion through technical assistance, training and equipment and by supporting: (a) a sociocultural survey to gather the basic information needed for the elaboration of a family and persons code and assisting in establishing such a code; (b) an employment study to evaluate the situation of women in the modern sector of the economy; (c) a sensitization campaign against traditional harmful practices such as female circumcision; (d) training of midwives; and (e) sensitization of women to the dangers of unassisted births.

47. UNFPA would also provide continued support to the Government in its efforts to consolidate and institutionalize the population education and family life education in-school programme. This will be achieved mainly through the effective use of the nationals trained under the previous programmes to continue to expand and extend the population and family life education programme. The Ministry of National Education would designate a new implementing body appropriate for this programme component.

Programme reserve

48. UNFPA would set aside a reserve of $300,000 to meet unforeseen needs that may arise during the period of the proposed programme.

Programme coordination

49. The local UNFPA office would assist the Government in coordinating the activities of implementing and executing agencies and would monitor the implementation of the programme. At the government level, the coordination of population activities is the responsibility of the Ministry of Planning and Cooperation. UNFPA has worked closely in the past with the World Bank and UNDP on the census programme and expects to continue this coordination and collaboration in the future as well as with other agencies working in the population field.

Programme monitoring, evaluation and management

50. Progress reports, annual tripartite review meetings and independent evaluations of programme components will be required in order to monitor the progress of the programme. More specifically,
the evolution of the number of health units offering reproductive health services will be one of the indicators required to monitor the programme. Beyond this routine monitoring, the programme will be evaluated by a mid-term review in 1998 and by a final review of the programme by the year 2000 in order to develop the 2001-2005 country programme.

51. The programme will be administered by the UNFPA Country Office under the supervision of the UNFPA Representative.

Financial summary

52. As indicated in paragraph 1, UNFPA assistance to the Government of Chad under the 1996-2000 programme would amount to $9.0 million, of which $8.0 million would be programmed from UNFPA's regular resources. UNFPA would seek to provide the balance of $1.0 million from a combination of UNFPA resources and other resources, including multi-bilateral resources, when and to the extent such additional resources become available. The following table shows how the programme areas would accommodate these two levels of funding.

<table>
<thead>

V. RECOMMENDATION

53. The Executive Director recommends that the Executive Board approve the proposed programme of assistance for Chad, as presented, subject to the availability of resources, and authorize the Executive Director to make the necessary arrangements for its management, funding and execution.
