Annual Session 2001 11 to 22 June 2001, New York Item 2 of the provisional agenda UNFPA

UNITED NATIONS POPULATION FUND

Report of the Executive Director

STATUS OF FINANCIAL IMPLEMENTATION OF COUNTRY PROGRAMMES AND PROJECTS APPROVED BY THE GOVERNING COUNCIL AND THE EXECUTIVE BOARD

Report of the Executive Director	Page
CONTENTS	1455
I. INTRODUCTION	2
II. COUNTRY PROGRAMMES AND PROJECTS APPROVED BY THE GOVERNING COUNCIL AND EXECUTIVE BOARD AND COMPLETED IN 2000 OR ONGOING IN 2001	3
III. COUNTRY PROGRAMMES STARTING IN 2001	6
IV. BALANCE OF UNFPA COMMITMENTS	6
ANNEX (containing glossary and tables 1 through 5)	7

I. INTRODUCTION

- 1. This report is submitted in accordance with Governing Council decision 84/21 and provides the Executive Board with information on the financial implementation of UNFPA country programmes and projects that were approved by the Governing Council at its thirty-eighth (1991) through fortieth (1993) sessions and by the Executive Board from 1994 to 2000. The report is submitted for the information of the Board and no decision or action is requested.
- 2. Information is provided on: (a) those programmes and projects that were completed in 2000; (b) those that are still ongoing in 2001; and (c) new programmes starting in 2001 that were approved by the Executive Board in 2000.
- 3. The report presents figures on total expenditures from all resources, including multibilateral funds. It should be noted that all terms such as "total expenditures" are explained in a glossary in the annex to this report.
- 4. It should also be noted that the starting date of a programme is the one mentioned in the document approved by the Governing Council or the Executive Board. The end of a programme is either: (a) the year during which all projects were completed; (b) the year preceding the one in which a subsequent programme began (there cannot be two contemporaneous UNFPA programmes within one country); or (c) the year during which a programme is considered completed for other reasons.
- 5. While in theory the implementation of an individual country programme could follow an even distribution of resources over the programme period, in reality that is not the case for a variety of reasons:
- (a) Each programme has its own programme dynamics; some programmes are "front-loaded" (they require more resources in the first years of the programme period than in later years), while the opposite is true for end-loaded programmes. All programmes require a variable level of annual resources over the programme period.
- (b) Even under the UNFPA's multi-year funding framework the actual income from regular resources is not yet known for future years but only for the current year and, then, only at its end. Thus, decisions on the level of expenditures in the current year of each programme have to be made at the beginning of the year without knowledge of the level of resources available

¹ A programme is not necessarily regarded as completed when its original term has expired (since the duration of a programme may be extended) or when the resources originally approved have been expended (since additional resources may have become available or the income level may not have allowed implementation of the full amount).

over the remaining period of the programme. Such unpredictability of resource levels and flows may adversely affect programme implementation, but the introduction of the multi-year funding framework in decision 2000/9 is expected to improve the predictability of UNFPA resources.

- (c) Since programme implementation requires lead-time, some programmes do not allow a rapid response to sudden changes in actual income levels. To comply with the financial policy of maximizing the use of available resources while avoiding the use of the operational reserve, some shifts of resources between programmes may become necessary in any given year without prejudice to the original amount approved for the country programmes in question.
- 6. Tables displaying detailed information on all Governing Council- and Executive Board-approved country programmes and the Fund's balance of commitments are provided in the annex to this report.

II. COUNTRY PROGRAMMES AND PROJECTS APPROVED BY THE GOVERNING COUNCIL AND EXECUTIVE BOARD AND COMPLETED IN 2000 OR ONGOING IN 2001

- 7. In 2000, UNFPA replenished in full the funds withdrawn from the operational reserve due to the difficult financial situation in 1999. As a result, the Fund had to negotiate resource cuts with Governments of programme countries. This meant that country programmes as well as regional and interregional programmes were cut and many activities were either amalgamated or deleted. This has resulted in some constraints, including: credibility of the Fund vis-à-vis our partners, strain on programme implementation and impact on expected results of programmes. Furthermore, the actual income from regular resources during the past four-year period of 1997-2000 was \$1,096 million, only three quarters of the projected income of \$1,460 million in the work plan 1997-2000 as originally approved by the Executive Board. Given this lower level of income compared with expected resources, UNFPA reduced the resources available for programmes accordingly.
- 8. Although UNFPA has been using the resource delivery rate (defined in document DP/1989/34) as a measurement of programme performance, in the context of declining programme resources this rate does not accurately reflect programme performance and such figures should be interpreted cautiously. For instance, if the rate were computed on the basis of income received and the level of resources made available to the individual programme in the last four years under review, the resource delivery rate would indicate that the programme had performed exceedingly well. However, at the same time the unpredictability of resources during 1997-2000 has made it difficult for UNFPA to adjust the scale and pace of programme implementation to be in line with the actual income received. Ensuring a growing and predictable level of resources for UNFPA should therefore remain a major priority.

DP/FPA/2001/4 (Part IV) English Page 4

- 9. Of the programmes² the Executive Board and the Governing Council approved and started in 2000 or prior to 2000, 14 programmes were completed in 2000 and 80 programmes are ongoing in 2001 (see table 1).
- 10. For the 14 programmes that were completed in 2000, the <u>total</u> expenditures from all resources were \$145.3 million against a total approval of \$187.9 million, which results in a total resource delivery rate of 77 per cent on average, ranging between 59 per cent and 115 per cent (see table 2). In three of these programmes Guatemala, Cambodia and Viet Nam the total resource delivery rate exceeded 100 per cent.
- The expenditures from regular resources for these 14 programmes were \$131.3 million 11. against a regular approval authority of \$145.9 million, resulting in a regular resource delivery rate of 90 per cent (see table 2). It should be noted in this regard that expenditure authority for UNFPA country programmes includes expenditures from regular resources and from other resources, including multi-bilateral resources. If multi-bilateral funding in the authorized amount is not obtained and regular resources are available, the Fund is authorized to spend regular resources up to the total approved amount. Of the 14 programmes completed in 2000, individual programmes utilized regular resources at a level of between 68 per cent and 177 per cent of the approved amount. The regular resource delivery rate was relatively low for Burkina Faso (68 per cent), Ghana (68 per cent) and Indonesia (72 per cent). In general, there were overarching factors that would explain most under-implemented programmes in Africa. These included financial constraints (in particular, in 1999 and 2000), introduction of the logical framework (adopted in 1997, but the guidelines and training were not provided until late 1998) and a high staff turnover in some countries. The low resource-utilization rates of programmes in both Burkina Faso and Ghana were mainly due to considerable delays in the formulation of subprogrammes and component projects stemming from the fact that the guidelines for and training in the logical framework were not available at the beginning of the programme cycle. For the programme in Indonesia, the main reason for the relatively low implementation rate was the prolonged political and economic crises that hit the country since mid 1997.
- 12. For the 80 programmes that were ongoing on 1 January 2001, the total expenditure rates are generally higher the earlier the programme started, with the exception of Sierra Leone. The country programme in Sierra Leone started in 1993 and has had a total expenditure rate of 56 per cent, while the three programmes started in 1996 have an expenditure rate of 59 per cent on average. However, Sierra Leone has had a regular expenditure rate of 83 per cent, which is much higher than those started in 1996 (75 per cent on average). Total expenditures for all ongoing programmes were below the previously approved ceilings except one total expenditure in the Caribbean programme was higher than anticipated, a rate of 126 per cent. This

 $^{^2}$ Country programmes or individual large-scale projects approved by the Governing Council or the Executive Board.

programme has now been extended to 2002, and additional resources will be requested to accommodate the continuation of essential activities, including the preparation of a new programme.

- 13. The <u>regular</u> expenditure rate for these ongoing programmes is 69 per cent for Latin America and the Caribbean; 51 per cent for sub-Saharan Africa; 44 per cent for Arab States and Europe; and 41 per cent for Asia and the Pacific (see table 3b). Expenditure rates vary from one region to another due to a number of factors, such as differences in the distribution of programmes by starting and ending dates.
- 14. The majority of individual programmes that were ongoing in 2000 are being implemented as planned; however, a few programmes have a low implementation status of <u>regular</u> resources. Since the implementation of country programmes during the first two years of the programme period varies considerably for reasons outlined in paragraph 5 above, the present analysis focuses on programmes that have been ongoing for three years or more as of 1 January 2001.
- A number of country programmes that started in 1997 have low regular expenditure rates 15. after four years of implementation. They include programmes for Guinea (39 per cent) and Nigeria (42 per cent), each with one remaining year; and the programme for India (41 per cent), For the programme in Guinea, the introduction of the logical with two remaining years. framework guidelines and training of national counterparts resulted in considerable delays in the programming process. For the programme in Nigeria, there was a long delay in signing the subprogrammes and component projects due to a long period of negotiation. In the case of India, the low rate was due to a slow start during the first two years of the programme and financial constraints at a time when the programme had gained momentum. Also, a number of country programmes that started in 1998 have low regular expenditure rates after three years of implementation. They include the programme for Ethiopia (23 per cent), with one remaining year; and the programmes for Lesotho (15 per cent) and Guinea-Bissau (16 per cent), each with two remaining years. The programme in Ethiopia did not start its implementation until January 2000, two years later than planned due to various reasons. In Lesotho, civil unrest has been a challenge to the implementation of the programme; UNFPA is in the process of strengthening the country office and expects improvement in implementation this year. In Guinea-Bissau, the low implementation was mainly due to the political crisis in the country.
- 16. For programmes started in 1999, the regular expenditure rates average 26 per cent, ranging from 22 per cent for Benin to 30 per cent for Burundi. For those that started in 2000, the regular expenditure rates average 7 per cent, ranging from 2 per cent to 20 per cent.

DP/FPA/2001/4 (Part IV) English Page 6

III. COUNTRY PROGRAMMES STARTING IN 2001

17. UNFPA submitted a total of 13 country programmes planned to start in 2001 to the Executive Board for its consideration and approval in 2000 and at the first regular session 2001. Five are in the sub-Saharan Africa region, two in the Arab States and Europe region, three in Asia and the Pacific region and three in Latin America and Caribbean region. The total amount for these programmes is \$206.5 million, of which \$123.9 million is to be programmed from regular resources (see table 4).

IV. BALANCE OF UNFPA COMMITMENTS

18. The balance of UNFPA commitments from regular resources for ongoing programmes is \$384.1 million, distributed as follows: \$142.9 million for sub-Saharan Africa; \$64.2 million for the Arab States and Europe; \$151.2 million for Asia and the Pacific; and \$25.8 million for Latin America and Caribbean (see table 3b). The balance of commitments of regular resources for new programmes starting in 2001 is \$123.9 million – \$48.0 million for sub-Saharan Africa, \$8.5 million for Arab States and Europe, \$56.0 million for Asia and the Pacific and \$11.4 million for Latin America and Caribbean (see table 4). Thus, the total balance of commitments is \$508.0 million, distributed as follows: \$190.9 million for sub-Saharan Africa; \$72.7 million for the Arab States and Europe; \$207.2 million for Asia and the Pacific; and \$37.2 million for Latin America and Caribbean (see table 5).

ANNEX

Glossary

This report uses the following abbreviations and definitions in the tables:

Extension (Ext.): extension of duration in years beyond the duration originally approved by the Executive Board;

Total approval: amount approved for a country programme, composed of "regular resources" and "other resources" (normally, multi-bilateral resources under trust fund arrangements);

Regular approval: amount approved for the country programme from regular resources;

Total expenditure (Exp.): provisional amount spent up to and including 2000 against the total approval;

Regular expenditure (Exp.): provisional amount spent up to and including 2000 from regular resources. For technical reasons, cost-sharing is included in the regular expenditure;

Resource (Res.) delivery rate: the expenditure for a programme divided by the amount approved by the Governing Council or the Executive Board for the programme, as defined in document DP/1989/34 for completed programmes only. In this document the "total resource delivery rate" is based on all resources, while the "regular resource delivery rate" is based on regular resources only;

Expenditure (Exp.) rate: the percentage of approved resources spent up to and including 2000 since the beginning of the country programme, for ongoing programmes only. In this document, the "total expenditure rate" is based on all resources, while the "regular expenditure rate" is based on regular resources only;

Regular balance of commitments (commit.): the regular amount approved for the programme less the regular expenditures up to and including 2000. If negative, the regular balance of commitments is here treated as zero. Thus, the regular balance of commitments at the summary level does not necessarily equal the approved amount less the expenditure.
