I. DEVELOPMENT SITUATION, OBJECTIVES AND STRATEGIES

A. Current socio-economic situation

1. Background

1. Beginning in the 1970s - and until 1985-1986 - Cameroon experienced steady economic growth resulting from a dramatic rise in agricultural exports, chiefly cocoa and coffee, and in oil revenues. As a consequence, Cameroon's balance of payments was favourable and the surplus could be invested in the national economy. At the same time, Cameroon realized major progress in human development. The literacy rate went from 43.6 per cent in 1976 to 60 per cent in 1987. Life expectancy at birth rose from 38 years in 1970 to nearly 57 years in 1990 and the gross national product (GNP) rose by a yearly average of 3.6 per cent between 1965 and 1985. The human development index (HDI) - which is a relative measure (comparison among countries) of human development based on three indicators (income, level of education and life expectancy) - went from 0.228 to 0.378 between 1970 and 1985, representing an improvement of 0.15. Cameroon thus ranks 119th out of 160 States on a scale based on the progress achieved during the reference period.

2. Since 1986, Cameroon has been facing a major economic crisis brought on by the collapse of world oil, coffee and cocoa prices, which had disastrous repercussions on the public finances and served to block progress in human development. Moreover, this crisis exposed the predominance of the public sector (i.e., its role in the economy to the detriment of the private sector) and the inadequacy of the institutional environment. In 1987, the Government, on its own initiative, had taken adjustment measures, whose results, while positive, proved to be insufficient none the less.

3. This situation prompted the Government, in 1988-1989, to seek and obtain assistance from the International Monetary Fund (IMF), the World Bank, the African Development Bank (AfDB) and other bilateral donors in order to launch its programme to stabilize public finance and launch economic recovery.

2. Recent economic trends

4. The current economic situation in Cameroon is one of ongoing recession, as evidenced by a continual decline in the gross domestic product (GDP) since 1986; gradual depletion of State resources owing to a decrease in export income, with a resulting steady reduction in the State budget; an external debt which went from 857 billion CFA francs in 1985-1986 to 1,503.3 billion CFA francs in 1990-1991 (nearly 2,000 billion CFA francs in December 1991), representing 20.6 per cent and 47.3 per cent of the gross domestic product, respectively; a deficit in the balance of payments and treasury operations; mounting domestic and foreign arrears; a growing unemployment rate as a result of staff cutbacks in semi-public enterprises; and a recruitment freeze in the civil service.

3. Current major problems and medium-term prospects

5. Despite the progress already achieved in the implementation of its programme to stabilize public finance and launch economic recovery, the Government continues to face major problems, particularly the public deficit, the strain on the State treasury, external indebtedness, a shortage of bank liquidity, unemployment and the resulting socio-political implications. External disruptions reduce the certainty that positive expectations will be fulfilled.

6. The medium-term outlook will basically hinge on the gradual easing of all the above-mentioned difficulties, whose solution will depend on the dynamism of economic agents and their ability to assimilate and carry out the reforms undertaken. In this context, the Government intends to lay the groundwork for viable development which combines the requirements for economic growth, poverty eradication and environmental preservation.

7. The Government will focus its efforts on pursuing all the major priority programmes for recovery on which it is focusing its activity with a view to curbing the continuing economic decline - activities under the new agricultural policy, the processing of local raw materials and the whole range of measures to restore a favourable economic environment.

B. National development objectives and strategies

8. In view of the need to eliminate the above-mentioned problems which impede the recovery of economic activities, the Government has undertaken to explore new options with a view to rationalizing economic management: making public sector and semi-public enterprises more efficient; restoring the liquidity of the banking system; stimulating the private sector; creating an environment favourable to the creation of income-generating activities and new jobs; and taking into account environmental concerns in a viable long-term development perspective.

9. The Government has just taken a whole series of measures to improve the environment and promote economic recovery. In the legislative and regulatory sphere, an industrial free zone system has been set up, a new investment code has been adopted, the conditions governing commercial and industrial activity have been eased and plans for restructuring public and para-public corporations have been applied. In the institutional sphere, the Government has launched a number of economic recovery measures. Several reforms are in preparation (reform of the civil service, administrative reform and restructuring of the tax system). The capacities of the national administration will be strengthened to enhance the impact of these reforms.

10. As indicated in its statement of strategy, the Government is determined to promote the development of small- and medium-sized enterprises. The inputs of the various donors will therefore have to be integrated into a coherent overall plan which the Government intends to design for this purpose.

11. Because of the wealth, diversity and scale of the country's ecosystem, environmental protection and management are crucial, and the Government plans to devise a comprehensive strategy for enhanced natural resources management. This will increase output, and hence State revenues, while preserving the integrity of the ecosystem and ensuring that adequate resources are available for the future, thereby contributing to both sustainable development and human development.

12. Implementing such a reform programme requires substantial resources, which the Government intends to mobilize. Negotiations with the International Monetary Fund (IMF) and the Paris Club attest to the Government's determination to secure sufficient appropriate resources from the international community and friendly countries.

13. In executing the various programmes, account will be taken of the country's long-term development prospects. National experts will be closely involved and international expertise will be sought only where there is a shortage of national capacities.

II. EXTERNAL COOPERATION

A. Role of external cooperation

14. Official development assistance (ODA), which goes mainly to the agriculture, education and transport sectors, totalled \$470 million in 1989 as compared with \$284 million the year before. The French Government led the way among bilateral donors in 1988, providing 45 per cent of all ODA, followed by Germany (9.6 per cent), the United States (8.1 per cent), the Netherlands (6.1 per cent) and Canada (5.3 per cent). Among multilateral organizations, the European Economic Community (EEC) (10.7 per cent of all ODA) came ahead of the United Nations system (5.4 per cent).

15. Resources allocated to technical cooperation totalled \$118 million. The technical contribution of the United Nations Development Programme (UNDP) accounted for 5 per cent of the total.

B. Aid coordination arrangements

16. Aid coordination in Cameroon is in drastic need of improvement. The Government intends to undertake this task in order to maximize the benefits, eliminate duplication and increase the impact of foreign aid. The Government has yet to organize a Consultative Group meeting or a round-table conference and little progress has so far been made in promoting systematic exchanges of information with its partners at the national level. The attempts made thus far at the sectoral level, particularly in agriculture, industry and education, and at the multi-sectoral level, for instance, the social dimension of structural adjustment, are promising beginnings which the Government intends to pursue in order to make them effective.

/...

17. Exchanges of information among the main donors are irregular. The Government's strategy is to promote coordination at the national level through the Ministry of Planning. The proposed programme approach requires a high degree of coordination in order to ensure that the different programme components are perfectly integrated. It is here that the Government would like UNDP to play a decisive role. Accordingly, study groups on small- and medium-sized enterprises and the environment have been set up within the United Nations system at the initiative of UNDP.

18. Using this approach, the Government hopes to harmonize the programming cycles of United Nations agencies belonging to the Joint Consultative Group on Policy (JCGP); each agency would then be responsible for activities falling within its mandate and sphere of competence.

19. The programme approach, the launching of the national technical cooperation assessment and programmes (NATCAP) process and the cooperation among donors which underlies that process will lay the bases for effective overall coordination. The Government is counting on the active participation of UNDP to help make this strategy succeed.

III. THE COUNTRY PROGRAMME

A. Assessment of ongoing country programme

20. The fourth country programme (1987-1991) focused on two main areas of assistance: rural development, in the form of support for the Government's programme to promote medium-sized agricultural enterprises, and industrial development, in the form of support for industrial sector policy. The programme also supported the Government's efforts in the areas of transportation, telecommunications, trade, employment and tourism. Projects for restructuring and overhauling public corporations and State agencies were included in the fourth programme to meet the new needs created by the economic crisis.

21. It should be emphasized that the fourth programme was formulated at a time when economic growth was only just beginning to slow down. While the programme was being executed, the country's economic and financial situation deteriorated significantly. This overall deterioration made it impossible for the Government to meet its needs or to honour its commitments in terms of its financial input into projects and recurrent costs. This placed an additional burden on the indicative planning figure (IPF) for the fourth cycle and resulted in over-programming.

22. The mid-term review in May 1989 and the programme evaluation in the first quarter of 1991 confirmed the relevance of the objectives, priorities and strategies defined when the programme was first approved. The programme has achieved a number of positive results, of which the main ones are as follows:

/...

(a) In the rural development area, the introduction of appropriate technologies through the "reducing post-harvest losses" and "women and food technology" projects has made it possible to increase the incomes of small farmers. The "promotion of the cooperative movement" project has helped create a legal environment favourable to the autonomous, profitable cooperative movement through the drafting of a preliminary bill on cooperatives and commercial group farms;

(b) In the industrial development area, the Government drew up the master plan for industrialization with technical cooperation from UNDP. This master plan has had a genuine, decisive impact on the Government's economic reforms. Two results of this are the investment code and the process of economic liberalization;

(c) In the area of support for the public sector, studies of public and para-public enterprises provided the Government with relevant information on their economic and financial situation, enabling it to draw up plans for restructuring enterprises which are to remain in the public sector, to wind up unprofitable corporations and to privatize those in the sector which the Government wants to hand over to private interests;

(d) Many projects under the fourth programme have succeeded in developing and strengthening the Government's capacities to plan, analyse, evaluate and develop individual and collective skills;

(e) A very positive aspect of the implementation of the programme was the increasing use made of national human resources. There was a substantial decline in the number of resident international experts and a corresponding increase in the number of national experts and consultants, supported by international consultants.

23. The evaluation mission on the fourth country programme identified a number of shortcomings, however, relating, in particular, to the organization of counterpart personnel (delays in assignment or unsuitable profiles), resulting in an uneven transfer of knowledge, inadequate evaluation of project needs and limited coordination of assistance from agencies of the United Nations system.

24. The programme approach will make it possible to have an overall programme and more coordinated, judicious and systematic inputs from other donors. On the basis of this approach, special measures will be taken to bring about a progressive transfer of responsibilities in the direction of national execution, paying particular attention to better selection and stability of national counterparts and officials. In addition, a more realistic evaluation of needs will be required so as to ensure the optimal attainment of objectives.

25. Throughout the fourth programme, the Government greatly appreciated the contribution made by UNDP for its multilateral, neutral and flexible nature; its facilities for access to various sources of information, and to the

expertise, technology and experiences of other developing countries; its catalytic role in the mobilization of resources; and its role of coordination of the operational activities of the United Nations system.

B. Proposals for UNDP cooperation

1. Preparatory process

26. The preparation of the fifth country programme (1992-1996) required a series of consultations with UNDP, the specialized agencies of the United Nations system and the main multilateral and bilateral financing bodies.

27. An in-depth analysis of the situation in Cameroon was made from the point of view of its greatest needs and its capacity to absorb technical cooperation, and the priority objectives for the programme were defined. The analysis was based on: the mid-term review; the evaluation of the fourth country programme; the conclusions of the mission by the United Nations Population Fund (UNFPA); consultations with local JCGP offices on the possibilities of streamlining the programming exercise; the Statement of Development and Economic Recovery Strategy of May 1989; policy reforms and various documents drawn up on the situation in Cameroon; sectoral policies; the report on human development in Cameroon; and the results of the work of the three identification missions of the Management Development Programme.

28. UNDP and agencies of the United Nations system held discussions on the UNDP advisory note. These consultations made it possible to define the Government's needs more clearly within the framework of a programme approach. The Government officially confirmed its agreement to the main subjects and options and the programme approach presented in the advisory note and reiterated that the approach was in line with its concerns. Support missions financed by UNDP were conducted in Cameroon on the topics of small- and medium-scale enterprises and the environment; they were able to ascertain the views of the various participants on different aspects of these topics and to pinpoint priority needs in these spheres. This document, that is being submitted by the Government, is the outcome of these extensive consultations.

2. Strategy for UNDP cooperation

29. The fifth country programme will adopt the programme approach in the areas of concentration where UNDP resources are to be utilized. In view of the very limited resources, consultations will be held later with the donors assisting in each specific sector.

30. This programme is based on the Statement of Development and Economic Recovery Strategy of May 1989. Its objectives are in line with the priority concerns set forth in that statement. They are focused on three main sectors: (a) economic management; (b) promotion of small- and medium-scale enterprises in the primary, secondary and tertiary sectors; and (c) protection

and management of the environment. The development policy for the next five years places special emphasis on the establishment, strengthening and improvement of national capacity and the management of assistance through more effective coordination of that assistance. It aims to create a solid basis for lasting and dynamic development and to promote sustained human development in an autonomous manner.

31. The priority objectives of the fifth country programme and the resulting areas of assistance do not cover all sectors and activities of the national economy. This strategic choice is proposed because of the very limited resources and in order to ensure that the technical cooperation provided during the fifth programme is concentrated in key sectors so as to have an optimal impact on development. This will also avoid dispersal of the resources mobilized.

32. In order to promote human development in the fifth programme, the Government plans to organize a meeting of officials and donors to review the results of the study on human development in Cameroon; the objective would be to demonstrate the importance of incorporating human development issues into Cameroon's development strategies. The recommendations of this meeting will be taken into account in future initiatives.

33. In view of the advantages offered by UNDP cooperation, which have already been mentioned, the Government plans to use UNDP resources to develop and strengthen the capacity of the administration to manage clearly defined programmes and, where appropriate, to formulate integrated global policies and plans of action for their implementation, and to conduct the most critical activities, particularly the mobilization of additional resources and coordination. The Government also hopes to receive separate technical assistance from UNDP in special areas. Moreover, it appreciates the role that UNDP can play as catalyst by providing a small amount that will encourage other donors to provide additional resources.

3. Proposed UNDP cooperation in selected areas of concentration

THEME I: Economic management

34. The objective of this topic is to tackle one of the major difficulties in the restructuring of the economy through rationalization of the public sector, including semi-public companies, within the context of efforts to limit public expenditure, increase income and improve the efficiency of the public sector. The results of the recent study on human development in Cameroon will make a significant contribution to this exercise. There is also a need to establish a framework for the restructuring of the economy and general guidelines for long-term economic growth through the formulation of a Long-Term Perspective Study and a NATCAP process. This objective is in line with the strategy for development and economic recovery, the main components of which are designed to:

/...

- (a) Stabilize public finances in the medium term;
- (b) Improve the productivity of the public administration;
- (c) Rationalize the management of public and semi-public companies;
- (d) Continue the rehabilitation of enterprises of the public and semi-public sectors; and
- (e) Promote the institutional reforms needed to launch the economic recovery.

35. In the context of the sectoral objectives relating to the stabilization of public finances and the rationalization of the public sector, the structural adjustment programme provides for major reforms of the public administration designed to improve delivery of services and increase the efficiency of their operation. Within the framework of the economic management support project, the Government is formulating a general strategy for the organization of ministries on the basis of which organizational and staffing plans for individual ministries will be drawn up. UNDP will provide support, through the Management Development Programme, to the Government's efforts to implement this general strategy so as to bring about a significant and lasting improvement in the management capacity of the public sector.

36. The NATCAP process which was launched in 1991 is an essential instrument that will enable the Government and in particular the economic and technical cooperation office of the Ministry of Planning and Land Management, which is the focal point of external assistance to Cameroon, to make better use of technical cooperation and manage it more effectively.

37. Furthermore, a long-term perspective plan is essential in order to see the long-term picture and thus to ensure that resources are managed in such a way as not to jeopardize long-term goals. This plan will also make it possible to place economic development within the regional and subregional context. The regional UNDP project "Long-Term Perspective Study" (LTPS), will provide the studies needed for such a plan. The Human Development Report 1991 provides data concerning trends in the main social indicators in Cameroon during the period 1970-1990. It will prompt all development agents from Cameroon to ponder deeply on how to mobilize resources and how to seek the vital elements of planning and management of human development, while enhancing the effectiveness of statistical activities. More specifically, the economic management programme will strengthen macroeconomic analysis capacities to integrate the social dimensions and human development in the preparation of policies and programmes. In addition, support will be given to the establishment of certain sectoral plans while strengthening the Ministry of Planning's coordinating role.

38. At the end of the programme, a long-term perspective plan will have been launched, a technical cooperation policy adopted and applied as a matter of course and the management of the economy will have been streamlined.

39. Approximately 20 per cent of IPF resources, that is to say \$1,967,000 will be devoted to development of the economic management programme. To this should be added MDP resources in the order of \$1 million and NATCAP resources of \$500,000 and LTPS funds which remain to be determined. Supplementary resources will be sought at the level of regional and interregional programmes and other external sources of financing.

THEME II: Promotion of small- and medium-scale enterprises in the primary, secondary and tertiary sectors

40. One of the main assumptions of the Statement of Development and Economic Recovery Strategy of May 1989 is that the role of the State should be reoriented so that the State becomes an intermediary that will facilitate the operations of the private sector, particularly of small- and medium-scale enterprises, including handicrafts enterprises, while minimizing its direct control of the production and distribution system.

41. Small- and medium-scale enterprises encounter serious technological, organizational and management difficulties resulting in high costs that often affect their competitiveness on national and foreign markets. Despite the improvements that have taken place in respect of legislation and regulations, access to credit continues to handicap the development of small- and medium-scale enterprises. Efforts to support them would have had greater impact had they been carried out as part of a coherent plan.

42. In order to meet the above-mentioned concerns, a programme approach is being proposed for the promotion of small- and medium-scale enterprises; this will establish systematic links with development in the primary, secondary and tertiary sectors at the urban and rural levels; a clearly defined overall strategy and an action plan for its implementation. This approach will also determine ways and means of mobilizing resources. Moreover, special emphasis will be placed on institutional capacity, both in the public sector and in the private sector, so as to enable small- and medium-scale enterprises to carry out their activities in an optimum manner.

43. Resources allocated to this theme will be used for drawing up and launching a comprehensive policy, enhancing and maintaining an environment favourable to the growth and development of small- and medium-scale enterprises, strengthening the effectiveness of the Office of Small- and Medium-Scale Enterprises and Handicrafts enterprises (DPMEH), and improving the information exchange system. The programme will provide direct and indirect support to small- and medium-scale enterprises in the field of management training, transfer of appropriate technology, standardization and quality control. Efforts will also be made to increase the participation of women in the various production activities. In this context, the United Nations Development Fund for Women (UNIFEM) will provide direct support to small- and medium-scale enterprises set up by women in the context of activities relating to appropriate technologies. A multi-disciplinary mission is planned for the first quarter of 1992 to work out the details of the programme for the promotion of small- and medium-scale enterprises.

44. The programme will use the resources of regional projects financed by UNDP such as AFREDI (African small enterprise development initiative (RAF/87/145)), the micro-enterprise project (RAF/87/151) and other regional, interregional and global projects with a view to promoting contacts and cooperation at the regional, subregional and global level. Success will be measured by the number of viable small- and medium-scale enterprises, their turnover and by the number of production jobs created and sustained.

45. Using the results of the study on human development in Cameroon, poverty alleviation, especially in the comparatively disadvantaged provinces, participatory development, management of natural resources and integration of women in development will be reflected through the programme to promote small- and medium-scale enterprises.

46. Financing of the small- and medium-scale enterprise programme will account for 30 per cent of IPF, that is to say approximately \$2.9 million. To that will be added \$500,000 from UNIFEM to finance activities relating to appropriate technologies for women's small- and medium-scale enterprises.

THEME III: Protection and management of the environment

47. A great number of bilateral and multilateral donors, non-governmental organizations (NGOs) and community groups are already lending their support in the area of protection of the environment. Action is scattered, and the partners act within the strict framework of their own mandates and according to their own methods.

48. In order to resolve this problem, the Government proposes to draw up a comprehensive environmental policy. This policy would, on the one hand, improve coordination of sectoral activities and ensure optimum exploitation of space and natural resources. On the other hand, it would help identify an appropriate institutional framework for management of the environment.

49. In order to deal with the shortcomings of administrative structures having functions and responsibilities concerning the environment, the Government is requesting support for and reinforcement of their capacities. In that context, the programme will seek first to develop a policy and action plan for the protection and management of the environment, to strengthen the capacities of the Office for Town and Country Planning, which has the lead role, and to raise the consciousness of the people through seminars or other events. In addition, it will provide selective technical cooperation (material and logistic support) to the sectoral ministries having substantial responsibilities in the field of the environment, direct support for initiatives that count on the role of women in the environment and support for follow-up of the recommendations of the United Nations Conference on Environment and Development, which is scheduled to take place in Brazil in 1992.

50. The Government welcomes the collaboration of UNDP and the United Nations Sudano-Sahelian Office (UNSO) in the preparation of the report which it is to

/...

submit to the United Nations Conference on Environment and Development. The report will give a general overview of environmental problems and make suggestions for sustainable development based on priority areas. Furthermore a plan of action to combat desertification is currently being prepared by means of project CMR/89/X02. The project on the strengthening of capacities for implementing the tropical forests plan of action (CMR/88/004) will be continued. Negotiations are under way for receiving resources from the Global Environment Facility (GEF).

51. The indicators of success of this theme will be the enhanced capacity of government structures to plan environment actions and to manage the programme.

52. The environment programme will account for 30 per cent of IPF, in other words \$2.9 million, to which will be added related UNSO funds in the amount of approximately \$500,000 in the context of continued efforts to promote an integrated soil management system in the most affected areas of the country. The Government will place particular emphasis on the environment/population problem as part of the population policy facet which is to receive \$750,000 in financial assistance from UNFPA during the period 1992-1996. Furthermore, as part of the World Food Programme's programme for Cameroon for the period 1992-1996, the Government plans to make rational use of the \$4,024,000 allocated by WFP for the environment facet.

C. Assistance outside main country programme areas

53. Other key programme areas, particularly Striga, a parasite that attacks wheat crops in the northern part of the country, acquired immunodeficiency syndrome (AIDS), and the fight against cholera, also require assistance from the regional programme, special funds and large-scale support from many donors. Also, within the framework of the plan of action for the implementation of the recommendations for the follow-up to the World Conference on Education for All, proposals for joint activities will be made by UNDP, the United Nations Children's Fund (UNICEF), the United Nations Educational, Scientific and Cultural Organization (UNESCO), and the World Bank with a view to promoting programmes in the area of basic education. In addition, certain ongoing projects which are not covered by the three programme areas selected will be continued and will absorb 8 per cent of the IPF.

D. Implementation and management arrangements

54. In applying the programme approach, the Government will utilize the IPF resources to draw up an integrated programme and plan of action in each one of the programme areas related to small- and medium-scale enterprises and to the environment. Emphasis will be placed on institutional aspects and capacities, resource mobilization, coordination, and certain specific interventions clearly defined during the elaboration of the programme. The traditional approach will continue to be used in the execution of programmes aimed at strengthening economic management capacity.

/...

55. During the transition period, preparatory work will be undertaken on the implementation of certain projects with a view to the execution of a subsequent phase that will be integrated into the programme approach and the guidelines adopted for the fifth country programme.

56. Every effort will be made during the fifth programme to achieve a substantial increase in the rate of 11 per cent of the IPF executed by the Government during the fourth programme. The cooperation of the agencies of the United Nations system will be required mainly for project formulation, advisory and consultative services, technical backstopping, quality control and the placement of trainees and fellows. The programme will continue to rely on the skills of United Nations Volunteers and of national development services for project execution.

57. The programme approach will require improved management capacities. For each programme area, the Government will therefore propose a system to assess the activities carried out and to facilitate an exchange of views in order to be aware of the reactions of all parties to the impact of ongoing activities. Multisectoral and multi-disciplinary reviews will be conducted on a regular basis. Programmes in support of small- and medium-scale enterprises and the protection and sound management of the environment will be thematically assessed through progress reports and programme evaluations. The economic management programme as well as other project activities under the fifth programme will follow the traditional procedures for follow-up and assessment. The programme will be subject to a mid-term review and an in-depth evaluation.

58. The Government will explore with various donors the possibilities of co-financing the programmes.

Annex I

FINANCIAL SUMMARY

I. ESTIMATED RESOURCES (IPF plus cost-sharing) TAKEN INTO ACCOUNT FOR PROGRAMMING

(Thousands of dollars)

Carry-over from fourth-cycle IPF	(5 403)	
Fifth-cycle IPF	<u>15 137</u>	
Subtotal IPF		9 734
Project cost-sharing (Government)	-	
Project cost-sharing (third-party)	-	
Programme cost-sharing	<u>-</u>	
Subtotal cost-sharing		<u>-</u>
TOTAL		<u><u>9 734</u></u>

II. ALLOCATION OF RESOURCES (IPF plus cost-sharing) BY AREA OF CONCENTRATION

<u>Area of concentration</u>	<u>Thousands of dollars</u>			<u>Percentage of total resources</u>
	<u>IPF</u>	<u>Cost-sharing</u>	<u>Total</u>	
Small and medium-scale enterprises	2 900	-	2 900	30
